

TELESCOPIC SLIDING GATES

www.talbotautodoors.com.au

Space Saving Innovation

We believe that with property sizes getting smaller, you need to make use of your space. Our telescopic sliding gate was designed specifically with space constrained properties in mind allowing you to have an automatic gate and still have room to park your car.

Unique stacking system

Our unique telescopic sliding gate system allows up to three stacking panels, even on sloping driveways. This allows you to have the maximum driveway opening space without needing all the room to one side that a traditional sliding gate requires.

Custom Fabrication

All of our gates are custom made to order which allows our customers ultimate freedom of design when it comes to their gates. We use 3mm thick aluminium framing on all of our gate designs and stainless steel components for our telescopic kits which ensures the durability and strength that Talbot gates are renowned for.

Full Service

In addition to our telescopic gates, we are happy to supply and install matching pedestrian gates and fencing. We can also install compatible receivers to allow your garage door and new gate to function using only one remote. Our friendly staff will be there with you every step of the way; from helping select the right gate design, to ensuring the final installation is completed to our high quality standards.

Why Choose Us?

- Australian owned & operated since 1985
- Innovative solutions designed on a project by project basis
- Proven reliability with over 30 years experience installing doors & gates.
- Franchise network of highly skilled and knowledgeable installers throughout Sydney.
